TFC Steering Committee Notes

May 16th
Attendees: Glen, Shebu, Anton, Ben, Joanna, Dave

Minute:
- Infrastructure updates from Ben
  - We are on the new Jenkins server. No issues with it running slowly.
  - Jenkins software upgrade
  - Diskspace issue - have 1.5TB; add more SSDs or restrict storage. TF-A uses about 60% of the space.
    - Joanna - working with Paul Sokolovskyy about LAVA logs.   Paul helped the team in reviewing the artifacts and looking for issues.
    - Some tests are passing and keeping a lot of logs that may not be necessary.
  - UBL licensing?
    - Has a plan on what needs to be done. Will talk to Paul Sokolovskyy into writing the switcher.   Will need to add TF-A/M and Mbed TLS.
    - Also linked to running FVP jobs in the cloud.
- Releases
  - Joanna - TF-A May 10th to 17th.
  - The load on the CI is less with all patches in.   Working on some last bits of testing and plan on releasing end of the week, early next week.
- Board Status
  - ST Boards - STM32MP15 / STM32U5
  - Tomato & N1STP in progress
- MbedTLS
  - Nothing new. Stable, performance is good.
  - Releases - next one, end of September.   Expecting a small CI load increase.
- Priorities
  - Paul
    - Stability
    - Misra
  - Arthur
    - Boards - STM32U5 done; STM32MP15 & Tomato enabling tests; N1SDP
    - TFC-247 Mirror TF-M, TF-A, TS projects into GitHub
