**November 1st**
**Attendees:** Don, Joanna, Anton, Ben, Shebu, Matteo, Dan Handley, Dave Rodgman

**Minutes:**
- License free tool chain, models topic with the Arm tools team. Dan Owens and Paul Black to attend
    - Dan Owens sick
    - Don out next week but Ben will be here.  Will keep the meeting planned and move the Licensing conversation to then
- Maillist TF-A had a massive number of bounces, some caused "unsubscribes"
    - Don will move bounce score from 2 to 5
- Dave Rodgman  - TFC-260
    - Still slow, but happening on internal CI as well.  Went from a couple of hours to 10-15 hrs per job
    - Arthur increased build node count
    - Ben: Currently 72 jobs running
    - Ben - could the instance size be too small? T3-small.  Or too many jobs being spooled. Could increase but impact cost. Increasing size may not fix it.  Could be i/o related or AMI image related.  Could be image size related too.
    - Ben: Since "pinning CPU" for several days, makes it seem like AMI image related
    - https://imgur.com/j1RnlJP
    - Mbed-tls is on AWS, TF-A is on bare metal, so wouldn't conflict
    - Ben will update TFC-260
- Meeting this coming Friday to discuss MISRA into production.  Ben received the 10 licences.
