TFC Steering Committee Notes

September 5th
Attendees: Glen, Ben, Joanna, Olivier, Anton, Shebu, Dave

Minutes:
- Infrastructure
  - In Progress - FVPs in the Cloud & UBL license (TFC-198)
  - Requiring Paul to beta test. Setup a meeting with Paul & Vishal & Ben
  - UBL support is in LAVA, and the release will happen this week.
  - Ben will be contacting Paul Black for access to possibly have a need for extending licenses.
  - With the releases, it may be risky to release this before TF-M & TF-A start their release testing in late October/November.
  - Joanna, is there anything we can do to improve capacity with the upcoming release? Ben added two more nodes at the last release and a new Jenkins master to add capacity. Joanna and the team could try and load the server kicking and will try this on a weekend

- TF-M CI: LAVA test getting slow (TFC-479) - resolved, MPSs are now all online.

- MBedTLS - No issues

- TFC-247 Mirror TF-M, TF-A, TS projects into GitHub
  - TF-M has the mirroring.
  - A request from Trusted Services just added to the Ticket, Arthur will look into it.
- Joanna - A new request coming. Update docker images with compilers and new tools on staging. Could there be a test docker image?   They will raise a ticket for this with the details/requirements.

- Olivier - Random Jobs are failing; this is happening while servers are busy. TFC-488. Follow up with Paul on the status.

- TF-A LTS
  - TFC-471 TF-A LTS: Request for the script to generate an email for LTS release announcement
  - There is a meeting after this to review the issues.   Still waiting for some of the other requests to come in.   Matteo Carlini had requested that we prioritize this as its a direct request from the Board.
- Priorities
  - Paul
    - Misra TF-M / TF-A
    - FVP/UBL
  - Arthur
    - Boards - Chromebook Corsola
    - TFC-247 Mirror TF-M, TF-A, TS projects into GitHub
