# TFC Steering Committee Notes

(Send to: tf-openci-triage@lists.trustedfirmware.org)

**March 21st**
**Attendees:** Glen, Ben C, Joanna, Dave, Shebu, Anton, Bence

**Minute:**

- Outage - The filesystem was full last night.  This has been fixed; the system is back online.

- Infrastructure updates from Ben
    - Gerit outage - will this happen again?   This is very rare; we do update gerit occasionally.  There was a plugin that was leaking.
    - Outage today for around 11:00 UTC: LAVA Main and its workers; Open CI Jenkins - new server(ci.trustedfirmware.org); FlexNet licensing.  This will be down for 6 hours.
    - UBL Licensing is next on the lineup after

  MBedTLS (Spreadsheet)
    - Do you plan to migrate it from Stage to Production?  That is the thought, but no plans have been made.
    - Bence to send in some patches that will improve performance with the jobs and logging.  This should happen this week.
    - The current problem is that we are queuing, and the actual jobs are running in a similar performant time to Internal CI.
    - In a discussion at the board meeting last week, there has been a lot of investment. Internal CI is about 3K per month; right now, Linaro's latest estimate is ~$5K per month.  Shebu says there may be a reason to stop the performance tuning and return to the internal CI.
- Request from ST - looking for the U5 to be up and running in April.
- Priorities
    - Paul
        - LTS support:  TFC-395 TF-A LTS branch regression testing planning
        - TF-M Misra w/ TF-A Misra (low-hanging fruit)
    - Arthur
        - MbedTLS
        - Boards - Chrome Books are; Wrap up ST boards; Start on Chromebooks (Tomato & Corsola)
