TFC Steering Committee Notes

October 31st
Attendees: Glen, Ben, Olivier, Karen, Joanna
Minutes:

- Introduction - Karen
- Infrastructure
  - Flexnet Licenses? Installed and running. Old licenses will be cleaned up.
  - TFC-533 OpenCI is getting slow
    - It is slow, two servers were added and Joanna noted that things are more stable, with very few timeouts
    - The volume will pace down with code freeze on the 7th and looks like this is on schedule.

- TrustedFirmware.org
  - The web pages are looking good.   Leads have been notified, and no issues have been mentioned. The ticket can be closed.

- Paul
  - Working on UBL Licensing.

- Arthur
  - New board from ST for the Lava Lab
  - IAR Compiler prototype

- Prioritization
  - The top 4 priorities from the board are - Boards, TF-A LTS, UBL Licensing, and IAR Compiler support
    - FVP in the cloud is a work in progress and needs to be deployed to help with overall performance.
  - TF-A LTS requests
    - TFC-510 TF-A LTS: Patch Monitoring/Triaging
    - TFC-471 TF-A LTS: Request for the script to generate an email for the LTS release announcement
    - Are all the issues in tickets? Joanna will check to see if they have any additional tasks.
  - Expect Paul to wrap up with UBL Licensing and deploy this after the Release cycle, followed by FVP.   Arthur is part-time in the latest contract and will be working on boards with spare time going to the IAR Compiler.
