

## TFC Steering Committee Notes

(Send to: [tf-openci-triage@lists.trustedfirmware.org](mailto:tf-openci-triage@lists.trustedfirmware.org))

**January 3rd**

**Attendees:** Glen, Ben C, Shebu, Joanna, Anton, Dave R, Don

### Minute:

- MbedTLS
  - Running well over the holidays, 1 failure due to timeout of CodeCoverage
  - Dave Rodman to provide timing data for the [Spreadsheet](#), we need to be able to compare the average of the PR requests as there are sometimes multiple in a day.
  - Meeting on Thursday to sync up - 8:30 EST
- Joanna
  - FYI: TF-A TFC-353 and TFC-297 look like tickets that can be closed.
  - ChromeBook - Mediatek one has started to fail. Flashing error.
    - TFC-382: TF-A: Test result parser is over-picky regarding test failures
- Anton
  - [TFC-355](#): Random Proxy Error on LAVA server (tf.validation.linaro.org)
  - Ben to follow up with Lab team on this.
- Joanna
  - They are about 99% now running in the openCI. Internal had a slack channel about test pass/fail. Is it possible to add all her team on this?
    - Joanna to look into this, what is required. We currently are using a “Free” version and not clear what the limitations are on it.
- 4th agent has been added for Production. There are 3.5 servers for production and .5 for Staging. This is helpful with spinning up Misra.
- Priorities? (Ran out of time on this topic)
  - MBedTLS stabilization
  - Boards (have quickly created an estimated 6-9 month backlog)
  - MISRA - Finish TF-A, Next TF-M (looking for a Plan for this)
  - Other Priorities:
    - Joanne’s request for an N1SDP board in the Lava Lab & Windows build nodes. Where do these fit?
    - Long-term H/W Plans - based on the current platform backlog, will need 3rd rack in 1 yr. OR Remove older boards? No need to remove anything right now.
    - LTS is also something that needs to be in the plans.
    -
