TFC Steering Committee Meeting Minutes

(Send to: tf-openci-triage@lists.trustedfirmware.org)

April 30, 2024
Attendees: Karen, Paul, Anton, Ben, Joanna, Bence, Janos
Minutes

Note **- Monday, May 6 is a holiday in the UK**

- Infrastructure (FVPs in Tux)
  - TF-A
    - May have some issues with CI, but that has to be confirmed when Olivier returns
  - TF-M
    - Paul has sorted out a number of issues for TF-M this past week (Thanks Paul!)
    - The release is now back on track
  - MBedTLS
    - Everything is working now on Flexnet
    - Still need to get some patches merged
  - IAR Compiler
    - As the LTS tickets have been resolved, Arthur is now back working on IAR
    - He's completed the POC for the compiler
    - Now needs to get a contact at IAR to acquire a license and move forward to production
    - Robin and Anders were suggested
    - Karen to follow up with Arthur and provide him with this info
  - Ben
    - Flexnet
      - The old Flexnet license expires at the end of today
      - The new Flexnet license has been extended and is now deployed
    - UBL Rate Limits
      - After meeting with the folks from UBL it seems like the 1-year license file might be the best option
      - Have another meeting with them today to discuss the 1-year license, risks, etc.
      - Should be able to move to UBL over the next month or so
    - FVP Images
      - Ben asked what FVP images are being used for TF-A and TF/M. Requested a list of images.
      - **Action** - Joanna to provide Ben with a list for TF-A
      - **Action** - Anton to provide Ben with a list for TF-M
    - Git Server
      - Git server is still being a bit problematic
        - It's been mostly reliable lately as we've only seen 1 downtime/day as opposed to 4-5/day
        - Seeing some job failures because of the bare repo

- o After the releases are finished we'll move to Kubernetes. Can't do it now in the middle of a release as it will be too risky.
  - o It's working behind the scenes now is doing well
  - o Ben asked for feedback if it's causing issues
- o Paul
  - [TFC-606] Paul updated the ticket with his thoughts/views
    - o Anton said they could go ahead without updating the repo
    - o It was decided we will keep the ticket open and address at another time as it's low priority
  - Paul has been focused on the releases over the last week and hasn't done anything on UBL as releases are the priority
  - [TFC-614] Working on this ticket as well trying to reproduce the issues
